"Cloning and sequence analysis of cDNA clones for bovine aortic-
endothelial-cell transplutaminase.";
Eur. J. Blochem. 2021.5-21(1991).
-!- FUNCTION: CATALYZES THE CROSS-LINKING OF PROTEINS AND THE
CONJUGATION OF POLYAMINES TO PROTEINS.
-!- CATALYTIC ACTIVITY: PROTEIN GLUTAMINE + ALKYLAMINE = PROTEIN
N(5)-ALKYLGLUTAMINE + NH(3).
-!- COPACTOR: CALCIUM IS REQUIRED FOR TRANSGLUTAMINASE ACTIVITY.
-!- SUBUNIT: MONOMER (BY SIMILARITY).
-!- SUBUNIT: MONOMER (BY SIMILARITY).
-!- SUBUNIT: MONOMER (BY HIGHEST LEVELS ARE DETECTED IN THE LUNG. LOW
-!- TISSUE SPECIFICITY: HIGHEST LEVELS ARE DETECTED IN THE LUNG. LOW
-!- TISSUE SARE FOUND IN THE LIVER, SPLEEN AND HEART, BUT NOT IN THE

DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING CYCLES OF A 28-RESIDUE REPEAT PATTERN COMPOSED OF 4 HEPTAPEPTIDES, CHARACTERISTIC FOR ALPHA-HELICAL COLLED COLLS.

MISCELLANDEOUS: EACH MYOSIN HEAVY CHAIN CAN BE SPLIT INTO 1 LIGHT MEROWYOSIN (LAM) AND 1 HEAVY MEROWYOSIN (HAM). IT CAN LATER BE SPLIT EVETHER INTO 2 GLOBULAR SUBFRAGMENTS (S1) AND 1 ROD-SHAPED
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Simons M., Wang M., McBride O.W., Kawamoto S., Yamakawa K.,

Pred. No. is the number of resuffs predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New nucleic acid containing regulator and LHP gene of Mycobacterium tuberculosis - useful in vaccines, for diagnosis, and for expression of heterologous proteins

ó

Thu Jul

```
The present invention is directed to a polynucleotide carrying the regulatory expression signals of the ESAT-6 protein as well as an open reading frame coding for an antigenic protein LHP from Mycobacterium tuberculosis. Host cells comprising the polynucleotide are used for the recombinant expression of the protein. The recombinant polypeptide can be used as immunogens and vaccines, to protect against bacteria of the N. tuberculosis complex in humans or animals (the vaccines may include other immunogenic proteins of the bacteria or their fragments, specifically ESAT-6); and (b) for diagnosing tuberculosis infection by detection of specific antibodies. The regulatory region present in the polynucleotide may be used to express almost any heterologous protein in mycobacteria, particularly as a fusion with polyhistidine. The two proteins encoded by the polynucleotide, LHP and ESAT-6, are expected to provide a synergistic increase in ability to induce a protective immune response. Sequences AAY03706-713 represent antigenic fragments of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antigen; immunogen; vaccine; tuberculosis; non specific adjuvant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            new immunogenic polypeptide has been developed comprising an

```
immunogenic part of a soluble Mycobacterium tuberculosis antigen (or its variant differing only in conservative substitutions and/or modifications). The present sequence represents a M.tuberculosis antigen, Tb38-1 Peptide 6. The immunogenic protein, and fusion proteins antigen, Tb38-1 Peptide 6. The immunogenic protein, and fusion proteins containing one or more of the proteins or one of the proteins plus ESAT-6, are useful in vaccines, preferably when formulated with a non-specific adjuvant, to induce an immune response against M.tuberculosis (for treatment or prevention).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tuberculosis; immunogenic; soluble; antigen; protective immunity; TB; vaccine; pharmaceutical; infection; diagnosis.
                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents an immunogenic portion of a soluble Mycobacterium tuberculosis (MT) antigen which can be used in a methoc for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunising against M. tuberculosis infection or may be used for the diagnosis of tuberculosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Immunogenic Mycobacterium tuberculosis polypeptide(s) and DNA - use to develop products for the detection of M. tuberculosis infection and for diagnosis, treatment and prevention of tuberculosis

                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's, DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to

The present invention is directed to a polynucleotide carrying the regulatory expression signals of the ESAT-6 protein as well as an open regulatory expression signals of the ESAT-6 protein as well as an open reading frame coding for an antigenic protein LHP from Mycobacterium tuberculosis. Host cells comprising the polynucleotide are used for the recombinant expression of the protein. The recombinant polypeptide can be used as immunogens and vaccines, to protect gainst bacteria of the tuberculosis complex in humans or animals (the vaccines may include other immunogenic proteins of the bacteria or their fragments, specifically ESAT-6; and (b) for diagnosing tuberculosis infection by detection of specific antibodies. The regulatory region present in the polynucleotide may be used to express almost any heterologous protein in mycobacteria, particularly as a fusion with polyhistidine. The two provide a synergistic increase in ability to induce a protective immune response. Sequences AAV03706-713 represent antigenic fragments of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid containing regulator and LHP gene of Mycobacterium tuberculosis - useful in vaccines, for diagnosis, and for expression of heterologous proteins
ESAT-6 protein; antigenic protein; LHP; Mycobacterium tuberculosis; immunogen; vaccine; bacteria; tuberculosis; regulatory; synergistic; immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ESAT-6 protein; antigenic protein; LHP; Mycobacterium tuberculosis; immunogen; vaccine; bacteria; tuberculosis; regulatory; synergistic;

New immunogenic polypeptide(s) from Mycobacterium tuberculosis - are useful in vaccines for prevention or treatment of tuberculosis, also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (of sariant differing only in conservative substitutions and/or modifications). The present sequence represents a M tuberculosis antigen, Tb38-1F3. The immunogenic protein, and fusion proteins containing one or more of the proteins or one of the proteins plus ESAT-6, are useful in vaccines, preferably when formulated with a non-specific adjuvant, to induce an immune response against M.tuberculosis (for treatment or prevention).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antigen; immunogen; vaccine; tuberculosis; non specific adjuvant;
                                                                                                                                                                                                       Skeiky YAW;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ACC NO SERVICE                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention is directed to a polynuclectide carrying the regulatory expression signals of the ESAT-6 protein as well as an open reading frame coding for an antigenic protein LHP from Mycobacterium tuberculosis. Host cells comprising the polynuclectide are used for the recombinant expression of the protein. The recombinant polypeptide can be used as immunogens and vaccines, to protect against bacteria of the W. tuberculosis complex in humans or animals (the vaccines may include other immunogenic proteins of the bacteria or thair fragments, specifically ESAT-6; and (b) for diagnosing tuberculosis infection by catection of specific antibodies. The regulatory region present in the polynucleotide may be used to express almost any heterologous protein in mycobacteria, particularly as a fusion with polyhistidine. The two proteins encoded by the polynucleotide, LHP and ESAT-6, are expected to provide a synergistic increase in ability to induce a protective immune commons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ő

                                                                                                                                                                                                                                                                                                                         ö
                                                                                                    A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (or its variant differing only in conservative substitutions and/or modifications). The present sequence represents a M.tuberculosis antigen, TD38-IF3. The immunogenic polypeptide can be used to diagnose M.tuberculosis infection by forming complexes with specific antibedies in the sample. Fragments of DNA encoding the immunogenic polypeptide can be used as diagnostic primers or probes and agents that bind to the antigen, especially monoclonal antibodies or equivalent polyclonal antibodies, are also used for diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents an immunogenic portion of a soluble Mycobacterium tuberculosis (WT) antigen which can be used in a method for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines and/or pharmaceutical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Tuberculosis; immunogenic; soluble; antigen; protective immunity; TB; vaccine; pharmaceutical; infection; diagnosis.

compositions for immunising against M. tuberculosis infection or may be used for the diagnosis of tuberculosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This polypeptide comprises Mycobacterium tuberculosis antigen Tb38-IF3. A DNA molecule (see AAV44400) coding for Tb38-IF3 was isolated from a M. tuberculosis strain H37Kv genomic library. The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see AAW64291-W64379) comprising an antigenic portion of a soluble M. tuberculosis antigen, or an immunogenic portion of an M. tuberculosis antigen, as well as DNA sequences encoding such polypeptides, recombinant expression vectors and transformed or transfected host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient using these polypeptides, antibodies or oligonucleotide probes and primers, for the diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated Mycobacterium tuberculosis polypeptides and DNA - used to develop products for the detection of M. tuberculosis infection and diagnosis of tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

This invention describes novel recombinant antigens and their encoding nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculogis antigen (Ag). Also described are vaccines and fusion protein—Containing M. tuberculosis Ag's.

M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion by, T, B or natural killer cells and/or macrophages in tuberculosis-immune subjects. AAZ19249 to AAZ19460 and AAX39083 to

```
This sequence represents an immunogenic portion of a soluble Mycobacterium tuberculosis (MT) antigen which can be used in a method for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunising against M. tuberculosis infection or may be used for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Tuberculosis; immunogenic; soluble; antigen; protective immunity; TB; vaccine; pharmaceutical; infection; diagnosis.
                                                                                                                            A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (or its variant differing only in conservative substitutions and/or modifications). The present sequence represents a M.tuberculosis antigen. TD38-1. The immunogenic polypeptide can be used to diagnose M.tuberculosis infection by forming complexes with specific antibodies in the sample. Fragments of DNA encoding the immunogenic polypeptide can be used as diagnostic primers or probes and agents that bind to the antigen, especially monoclonal antibodies or equivalent polyclonal antibodies, are also used for diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                        New immunogenic polypeptide(s) from Mycobacterium tuberculosis - are useful in vaccines for prevention or treatment of tuberculosis, also for diagnosis
                                                                                                                                                                                                                                                                                                                                    A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (or its variant differing only in conservative substitutions and/or modifications). The present sequence represents a M.tuberculosis antigen, Tb38-1. The immunogenic protein, and fusion proteins containing one or more of the proteins or one of the proteins plus ESAT-6, are useful in vaccines, preferably when formulated with a mon-specific adjuvant, to induce an immune response against M.tuberculosis (for treatment or prevention).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antigen; immunogen; vaccine; tuberculosis; non specific adjuvant;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                      The present invention is directed to a polynucleotide carrying the regulatory expression signals of the ESAT-6 protein as well as an open regulatory expression signals of the ESAT-6 protein as well as an open reading frame coding for an antigenic protein LHP from Mycobacterium tuberculosis. Host cells comprising the polynucleotide are used for the recombinant expression of the protein. The recombinant polypeptide can be used as immunogens and vaccines, to protect against bacteria of the M. tuberculosis complex in humans or animals (the vaccines may include other immunogenic proteins of the bacteria or their fragments, specifically ESAT-6); and (b) for diagnosing tuberculosis infection by captual ESAT-6; and (b) for diagnosing tuberculosis infection by colynucleotide may be used to express almost any heterologous protein in mycobacteria, particularly as a fusion with polyhistidine. The two provide a synergistic increase in ability to induce a protective immune control of the column and column
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ó

E,

The present invention is directed to a polynucleotide carrying the regulatory expression signals of the ESAT-6 protein as well as an open reading frame coding for an antigenic protein LHP from Mycobacterium tuberculosis. Host cells comprising the polynucleotide are used for the

Claim 21; Page 64; 88pp; English.

```
recombinant expression of the protein. The recombinant polypeptide can be used as immunogens and vaccines, to protect against bacteria of the wit tuberculosis complex in humans or animals (the vaccines may include other immunogenic proteins of the bacteria or their fragments, specifically ESAT-6); and (b) for diagnosing tuberculosis infection by detection of specific antibodies. The regulatory region present in the polynucleotide may be used to express almost any heterologous protein in mycobacteria, particularly as a fusion with polyhistidine. The two proteins encoded by the polynucleotide, LHP and ESAT-6, are expected to provide a synergistic increase in ability to induce a protective immune response. Sequences AAY03706-713 represent antigenic fragments of the
                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New immunogenic polypeptide(s) from Mycobacterium tuberculosis - are useful in vaccines for prevention or treatment of tuberculosis, also for diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (or modifications). The present sequence represents a M.tuberculosis antigen, DB38-IR3. The immunogenic protein, and fusion proteins containing one or more of the proteins or the proteins blus ESAT-6, are useful in vaccines, preferably when formulated with a

This sequence represents an immunogenic portion of a soluble Mycobacterium tuberculosis (MT) antigen which can be used in a method for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunishing against M. tuberculosis infection or may be used for the diagnosis of tuberculosis.
                                                                                                                                                                                                                                                                                   soluble; antigen; protective immunity; TB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Immunogenic Mycobacterium tuberculosis polypeptide(s) and DNA - use to develop products for the detection of M. tuberculosis infection and for diagnosis, treatment and prevention of tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tuberculosis; infection; diagnosis; antigen; Tb38-1F3.

The present sequence represents a M.tuberculosis antigen, Tb38-IF3. The immunogenic polypeptide can be used to diagnose M.tuberculosis infection by forming complexes with specific antibodies in the sample. Fragments of DNA encoding the immunogenic polypeptide can be used as diagnostic primers or probes and agents that bind to the antigen, especially monoclonal antibodies or equivalent polyclonal antibodies, are also used for diagnosis.

The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion by, T, B or natural killer cells and/or macrophages in tuberculosis-immune subjects. AAI39249 to AAI39460 and AAY39083 to AAY39225 are used in the exemplification of the present invention.
                                                                                                                                                                                                                           New antigens from Mycobacterium tuberculosis useful in diagnostic skin tests and protective or therapeutic vaccines or compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antigen; diagnosis; detection; infection; antibody; immunisation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This polypeptide comprises Mycobacterium tuberculosis antigen Tb38-1F3. A DNA molecule (see AAV44400) coding for Tb38-1F3 was isolated from a M. tuberculosis strain H37Rv genomic library. The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see AAW64291-W64379) comprising an antigenic portion of a soluble M. tuberculosis antigen, or an immunogenic portion of an M. tuberculosis antigen, as well as DNA sequences encoding such polypeptides, recombinant expression vectors and transformed or transfected host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient using these polypeptides, antibodies or oligonucleotide probes and primers, for the diagnosis
                                                                                                                                                                                                                                                                                                                                                                             New isolated Mycobacterium tuberculosis polypeptides and DNA - used to develop products for the detection of M. tuberculosis infection and diagnosis of tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mycobacterium tuberculosis; M. tuberculosis; antigen; immunogen; immunotherapy; diagnosis; immunisation; vaccine; infection;

The present sequence represents a M.tuberculosis antigen, TD38-1. The immunogenic protein, and fusion proteins containing one or more of the proteins or one of the proteins plus ESAT-6, are useful in vaccines, preferably when formulated with a non-specific adjuvant, to induce an immune response against
                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         tuberculosis - are
tuberculosis, also
                                                                                               nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antigen; immunogen; vaccine; tuberculosis; non specific adjuvant;

The present sequence represents a M.tuberculosis antigen antigen, TB38-1. The immunogenic polypeptide can be used to diagnose antigen, TB38-1. The immunogenic polypeptide can be used to diagnose M.tuberculosis infection by forming complexes with specific antibodies in the sample. Fragments of DNA encoding the immunogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
New immunogenic polypeptide(s) from soluble M. tuberculosis antigens - useful for diagnosis of M. tuberculosis infection \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polypeptide can be used as diagnostic primers or probes and agents that bind to the antigen, especially monoclonal antibodies or equivalent polyclonal antibodies, are also used for diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0;

This is an antigenic portion of Mycobacterium tuberculosis antigen 1938-1. A DNA sequence (see AAV44384) coding for antigen Tb38-1 was isolated from a M. tuberculosis strain H37Rv expression library using sera from patients having pulmonary or pleural tuberculosis. The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see AMM4291-M64379) comprising an antigenic portion of a soluble M. tuberculosis antigen, or an immunogenic portion of an M. tuberculosis antigen, expression vectors and transformed or transfected host cells. Also tuberculosis and diagnostic kits for detecting M. tuberculosis antigen, captubered are methods and diagnostic kits for detecting M. tuberculosis infection in a patient using these polypeptides, cells tuberculosis.
                                                                                                                                                                                                                                                                                                                                              New isolated Mycobacterium tuberculosis polypeptides and DNA - used to develop products for the detection of M. tuberculosis infection and diagnosis of tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tuberculosis; antigen; fusion protein; Tb38-1; diagnosis; therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        100.0%; Score 77; DB 19;

The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion by, T. B or natural killer cells and/or macrophages in tuberculosis-immune subjects. AAX19249 to AAX19460 and AAX39083 to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      THE STATE OF THE S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                     New fusion proteins useful for diagnosis, prevention and treatment of tuberculosis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                          TD38-1. The invention provides fusion proteins (see AAX32059771) containing at least 2 M. tuberculosis antigens such as TD38-1, e.g. TDF-2 (see AAX32063) and a TD49-TD38-1 fusion. The new fusion proteins are useful as vaccines for preventing tuberculosis (claimed), for diagnosis (via in vitro assays or intradermal skin tests for detection of anti-M. tuberculosis antibodies), monitoring of disease progression, and treatment of tuberculosis. They are more effective immunogens than mixtures of the individual protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antigens from Mycobacterium tuberculosis useful in diagnostic skin tests and protective or therapeutic vaccines or compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mycobacterium tuberculosis; M. tuberculosis; antigen; immunogen; immunotherapy; diagnosis; immunisation; vaccine; infection;
                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents the Mycobacterium tuberculosis antigen

No. 1s the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1, Sequence 5, Sequence 2, Sequence 2, Sequence 2, Sequence 2, Sequence 2, Sequence 2, Sequence 7, Sequence 7, Sequence 7, Sequence 10, Sequence 10, Sequence 10, Sequence 10, Sequence 16, Seq

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                      myosin heavy chain [similarity] - slime mold (Dictyostelium discoideum)
N.Contains: myosin APPase (EC 3.6.1.32)
C.Species: Dictyostelium discoideum
C.Species: Dictyostelium discoideum
C.Date: 05-Oct-1988 #sequence_revision 05-Oct-1988 #text_change 02-Feb-2001
C.Accession: A26655; A47728; S00250

A.Fitle: Conserved protein domains in a myosin heavy chain gene from Dictyostelium discoint A26655, MUID:87092266
A.Accession: A26655
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A. Molecule type: DNA
A. Residues: 1734-1893 <WAG>
C. Comment: The root domain is highly periodic, containing a pattern of 7-residue repeats
C. Superfamily: myosin heavy chain; myosin motor domain homology
C. Keywords: actin binding; ATP; coiled coil; hydrolase; nucleotide binding; P-loop; phos
F: 1819-700-main: globular head «THED»
F: 89-747/Domain: myosin motor domain homology <WMOT>
F: 89-747/Domain: myosin motor domain homology <WMOT>
F: 179-186/Region: nucleotide-binding motif A (P-loop)
F: 819-2116/Domain: alpha-helical rod <ROD>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A; Molecule type: mRNA
